•Display advertisements in the system notification bar
•Download and request installation of new applications
•Send device information and details about installed applications to a remote location using Json

Server url is encrypted by DES with key 12343456 plus byte manipulation. After decryption we got the url: http://csapi.adfeiwo.com:9999/
It receives five actions, and data encapsulated using Json:
  /webviewAdClick
  /showCount
  /clientinfo
  /installCount
  /getCoverScreenAdList
And replies json.
